**A feel for the time.**

**Junghans Meister MEGA Kleine Sekunde:  
Classic elegance precise to the second.**

A unit of time is the same the world over. Hours, minutes and seconds are a fixed constant, however, give the impression of passing extremely quickly or slowly depending on the respective situation. Time will seem to just disappear in your most enjoyable moments, but can also drag on for an eternity in other scenarios.

The marvel of that brief, but mesmerising evening dusk for a limited period of time as the sun goes down, and before the darkness of nightfall, is captured in the *Meister MEGA Kleine Sekunde*. The deep blue dial with the most classic feature of the watch design, the small second, reflects this special ambience. At the heart of the watch, the Junghans radio-controlled movement simulates the cycle of day and night. The traditional, elegant design of the *Meister MEGA Kleine Sekunde* blends seamlessly with state-of-the-art technology; lending the time – whether sensed or actual – a face of particular beauty and precision.

## Variants

A stylish presentation is also guaranteed for the model with matt silver-plated dial and dark brown horse leather strap. The variant with metal bracelet, sapphire crystal and a water resistance of 5 bar is intended for those more inclined to sporty activities. As well as providing references for reception, the ring-rimmed sub dial also instrumental in highlighting the striking small second feature.

## State-of-the-art radio control technology

The *Meister MEGA Kleine Sekunde* is second to none when it comes to reliability. It features the state-of-the-art J101.66 radio-controlled movement from Schramberg which checks the hand position 1,440 times every day. The minute hand begins to move immediately, almost magically, before the minute is due to strike, thus displaying the completed minute with absolute precision to the second. Rotation of the date wheel is also triggered just prior to changeover from one day to the next, allowing the new day to begin with the correct date in the very first second. The small second feature is instrumental in the harmonization of classic watch design and state-of-the-art technology: With half-second increments of the second hand providing an additional indication of the watch's sheer precision, the fluid movement of the hands also accentuates the elegant design. Comfort of the MEGA technology proves a tremendous advantage when traveling: The desired time zone can be set by turning the crown in the classic manner, whereupon the wearer can lean back and relax as the hands position themselves automatically. Precise time transfer is also guaranteed to the second when setting using the Junghans MEGA App. In time zones with radio reception, the *Meister MEGA Kleine Sekunde* exhibits the customary comfort of a radio-controlled watch – the precise time is synchronised on a daily basis. State-of-the-art technology ensures that the wearer can rely on the Meister MEGA at all times anywhere in the world.

The *Meister MEGA Kleine Sekunde* combines Junghans precision and elegance in one timepiece – after all, there is nothing more valuable than your own time.

## Meister MEGA Kleine Sekunde Features

058/4902.00

058/4901.00

- Movement:** Multi-frequency J101.66 radio-controlled movement
- Functions:**
- Hands position control via ITC (Intelligent Time Correction)
  - Exact time display in half-second moves via SHM (Smart Hand Motion)
  - The Advanced Moving Function (AMF) enables the display of the actual time without deviation
  - Smart time setting via the Junghans MEGA App
  - Automatic search of time signal transmitter across 5 frequencies with the patented Junghans autoscan
  - Time zone setting precise to the second
  - Date display with perpetual calendar (also in quartz mode)
- Case:** Stainless steel, Ø 38.4 mm, height 9.2 mm, 5-times screwed stainless steel back with metallised mineral crystal, printed with a world map and reception instructions. Convex hard plexiglass with coating for enhanced scratch resistance
- Dial:** Matt silver-plated or midnight blue with sunray brush
- Hands:** Hands with environmentally-friendly Superluminova luminous substance
- Strap:** Calf leather or horse leather strap with buckle
- Water-resistance:** Up to 3 bar
- Special feature:** Change to sapphire crystal is possible
